Basic Installation Concept & Accessories

Door Contact Sensor;
Max. Contact Rate: 40VDC, 0.25A
(Only for Mag. Ctc. Models)

Caution Against Changing Factory Applied Settings !

Set the jumper position according to the power input correctly before switch ON the power.

Notice:

All models are Recognized to:
UL 294 and ULC S533-15 : Standard for Access & Egress.
Models 800-S-MC, 800-LED-MC, 1200-S-MC & 1200-LED-MC are listed to:
UL 1034, Standard for Burglary-Resistant Electric Locking Mechanism.
UL 294, Access Control System Units
* Models are not listed in UL 1034
** Value not verified by UL.

Remark: All drawing shown are for illustration purpose only.
Actual product may vary due to product enhancement.

General Installation Steps & Maintenance

1. Fold the installation template provided along the dotted line upto 90°.
2. Close the door & position the template at the lock jamb side of the frame with a gap 10mm.
3. Mark & drill holes according to template indications.
4. Install the Armature Plate to the door.
5. Loosely tighten screw through the adjustable slot on mounting plate to the door frame as indicated on installation template.
6. Make sure the mounting plate & armature align properly, then screw in the balance mounting screws.
7. Use allen wrench to unscrew anti tamper nut and install the lock by tighten the fixing screws on the mounting plate. Pull cable wire through frame to lock housing.
8. Screw in the anti-tamper nuts to prevent unauthorized access and make sure to fully tighten the fixing screw with proper tool "T" Handle Allen Key.
9. Connect the power wires accordance with NFPA 101 & all wiring to be completed inside protect area.
10. Connect the magnetic contact wire to the door monitoring system; according to the system guides.
11. Typical wiring method which shall be in accordance with CSA C22.1, Canadian Electrical Code, Part I, Safety Standard for Electrical Installations, Section 32.
12. It is recommended that to apply a light coat of silicon lubricant to the mating surface on a monthly basis to prevent rust.

Trouble Shooting

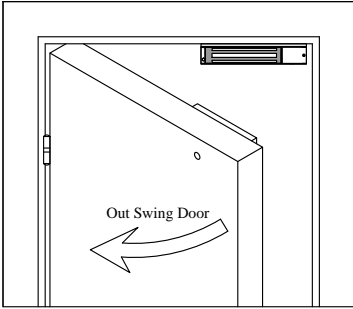

1. Sensor not functioning
 - Improper attachment of electromagnet and armature plate
 - Modification of the PCB
2. Door not locked
 - Incorrect wiring or no power from power supply
3. Reduced holding force
 - Poor contact of electromagnet and armature.
 - Be sure armature is loose enough that it can fully contact electromagnet along the entire length.
 - Mating surface is dusty or damaged.
 - Improper input voltage or wire size.

Performance Level

- Destructive Attack: Level I
- Line Security: Level I
- Standby Power: Level I
- Endurance 250,000 Cycles: Level IV (Relay Source #2 & #3)

Basic Bracket Installation Guide

Out Swing Door

1

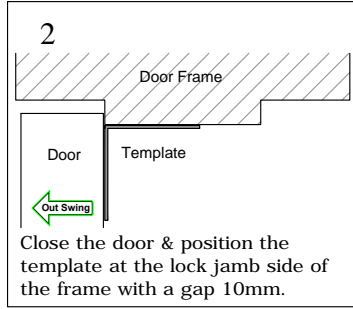

Installation Template

Fold the Installation Template along the dotted line upto 90°.

Note: Installation Template only applicable for model lock 300, 600, 800, 1200.

2

Door Frame

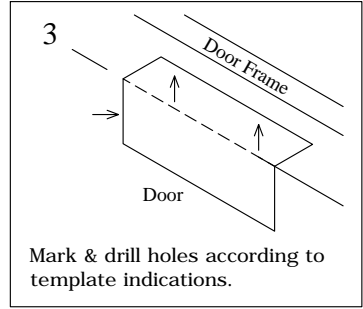

Door

Template

Out Swing

Close the door & position the template at the lock jamb side of the frame with a gap 10mm.

3

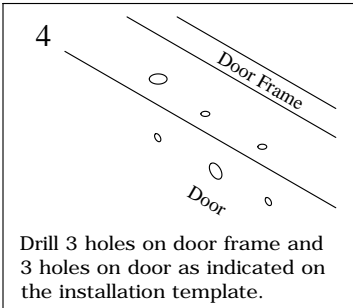

Door Frame

Door

Mark & drill holes according to template indications.

4

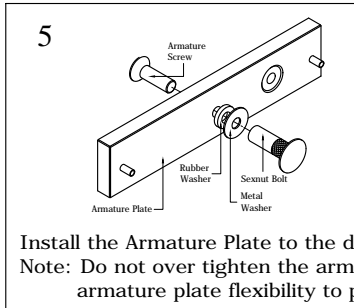

Door Frame

Door

Drill 3 holes on door frame and 3 holes on door as indicated on the installation template.

5

Armature Screw

Rubber Washer

Screw Bolt

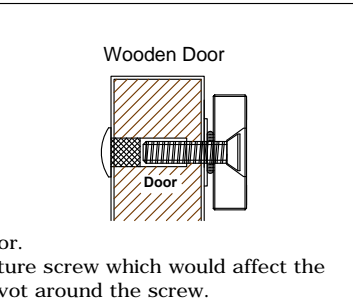

Metal Washer

Armature Plate

Install the Armature Plate to the door.

Note: Do not over tighten the armature screw which would affect the armature plate flexibility to pivot around the screw.

6

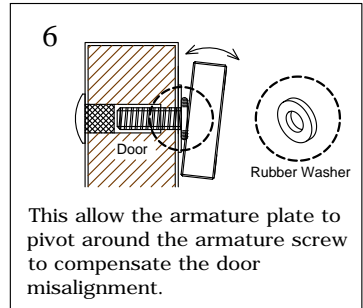

Door Frame

Door

Rubber Washer

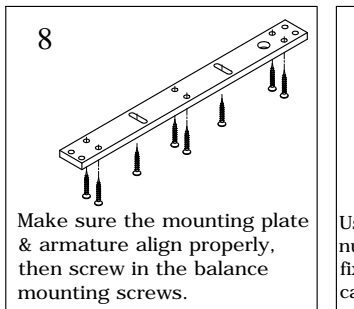

This allow the armature plate to pivot around the armature screw to compensate the door misalignment.

7

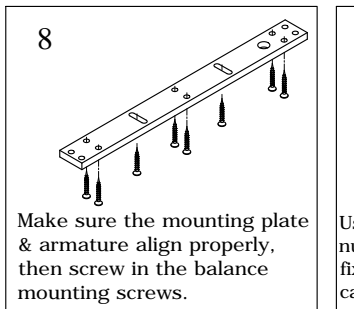

Loosely tighten screw through the adjustable slot on mounting plate to the door frame as indicated on installation template.

8

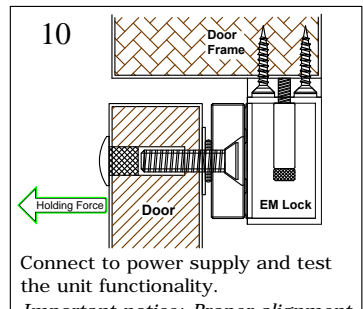

Make sure the mounting plate & armature align properly, then screw in the balance mounting screws.

9

Use allen wrench to unscrew anti tamper nut and install the lock by tighten the fixing screws on the mounting plate. Pull cable wire through frame to lock housing.

10

Door Frame

Door

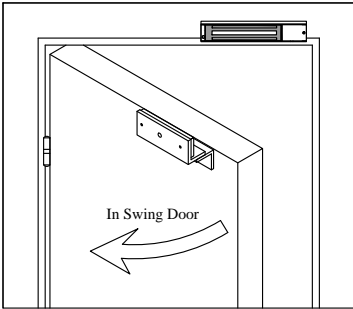

EM Lock

Holding Force

Connect to power supply and test the unit functionality.

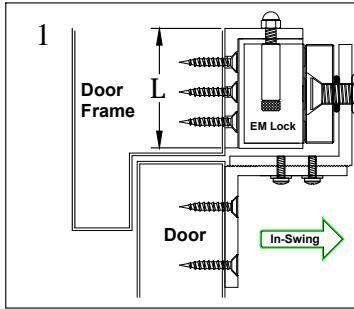

Important notice: Proper alignment between magnet & armature plate is important for the lock operate normally.

ZL Bracket for In-Swing Door Installation Guide

In Swing Door

1

Door Frame

Door

In-Swing

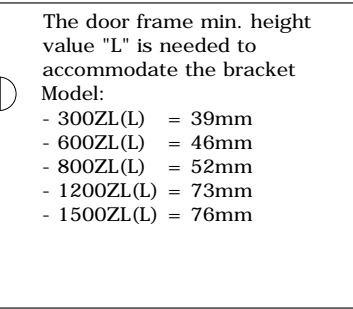

EM Lock

The door frame min. height value "L" is needed to accommodate the bracket

Model:

- 300ZL(L) = 39mm
- 600ZL(L) = 46mm
- 800ZL(L) = 52mm
- 1200ZL(L) = 73mm
- 1500ZL(L) = 76mm

2

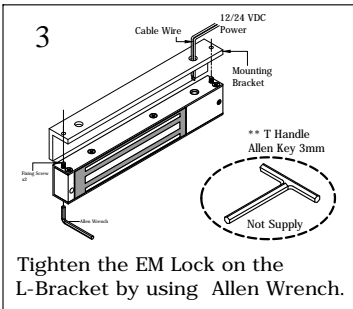

L-Bracket

Frame

Position the L-Bracket mounting location as close to the door upper corner with gap min. 10mm; make sure the door is closable.

3

Cable Wire

12/24 VDC Power

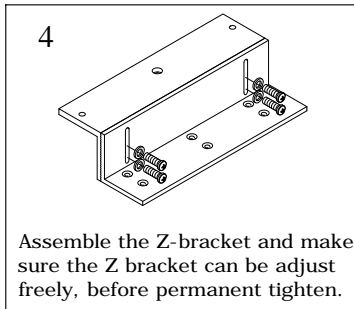

Mounting Bracket

** T Handle Allen Key 3mm

Not Supply

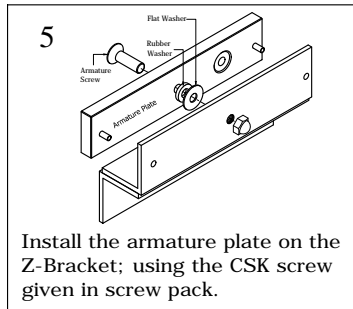

Tighten the EM Lock on the L-Bracket by using Allen Wrench.

4

Assemble the Z-bracket and make sure the Z bracket can be adjust freely, before permanent tighten.

5

Flat Washer

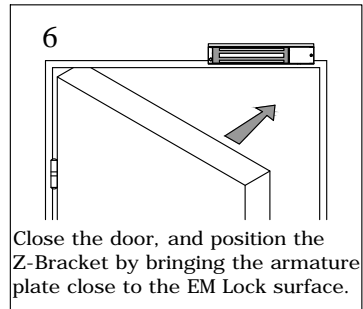

Rubber Washer

Armature Screw

Armature Plate

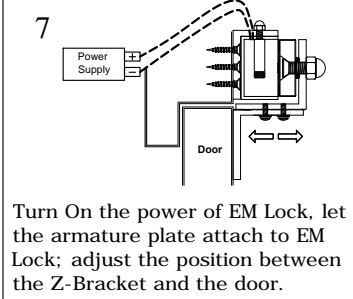

Install the armature plate on the Z-Bracket; using the CSK screw given in screw pack.

6

Close the door, and position the Z-Bracket by bringing the armature plate close to the EM Lock surface.

7

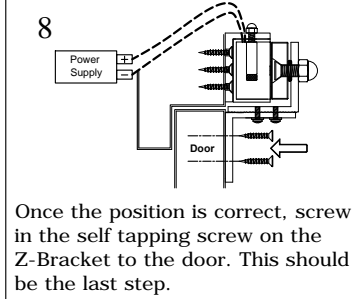

Power Supply

Door

Turn On the power of EM Lock, let the armature plate attach to EM Lock; adjust the position between the Z-Bracket and the door.

8

Power Supply

Door

Once the position is correct, screw in the self tapping screw on the Z-Bracket to the door. This should be the last step.

Distance in feet from power supply to the furthest lock unit
