Basic Installation Concept & Accessories

General Installation Steps & Maintainance

- 1. Fold the installation template provided along the dotted line upto 90°.
- 2. Close the door & position the template at the lock jamb side of the frame with a gap 10mm.
- 3. Mark & drill holes according to template indications.
- 4. Install the Armature Plate to the door.
- 5. Loosely tighten screw through the adjustable slot on mounting plate to the door frame as indicated on installation template.
- 6. Make sure the mounting plate & armature align properly, then screw in the balance mounting screws.
- Use allen wrench to unscrew anti tamper nut and install the lock by tighten the fixing screws on the mounting plate. Pull cable wire through frame to lock housing.
- 8. Screw in the anti-tamper nuts to prevent unauthorized access and make sure to fully tighten the fixing screw with proper tool "T" Handle Allen Key.
- 9. Connect the power wires accordance with NFPA 101 & all wiring to be completed inside protect area.
- 10. Typical wiring method which shall be in accordance with CSA C22.1, Canadian Electrical Code, Part I, Safety Standard for Electrical Installations, Section 32.
- 11. It is recommended that to apply a light coat of silicon lubricant to the mating surface on a monthly basis to prevent rust.

Trouble Shooting

- Sensor not functioning
 - Improper attachment of electromagnet and armature plate
 - Modification of the PCB
- 2. Door not locked
 - Incorrect wiring or no power from power supply
- 3. Reduced holding force
 - Poor contact of electromagnet and armature.
 - Be sure armature is loose enough that it can fully contact electromagnet along the entire length.
 - Mating surface is dusty or damaged.
 - Improper input voltage or wire size.

Performance Level

- Destructive Attack: Level I
- Line Security: Level I
- Standby Power: Level I
- Endurance 250,000 Cycles: Level IV (Relay Source #2 & #3)
